## Akumina Page Builder Experience - voice

This document shows the page experience in Edit Mode.

First let's talk about some of the buttons we see at the container level. We have the ability to modify and add additional containers.

Change Layout allows the page editor to change the container column configuration

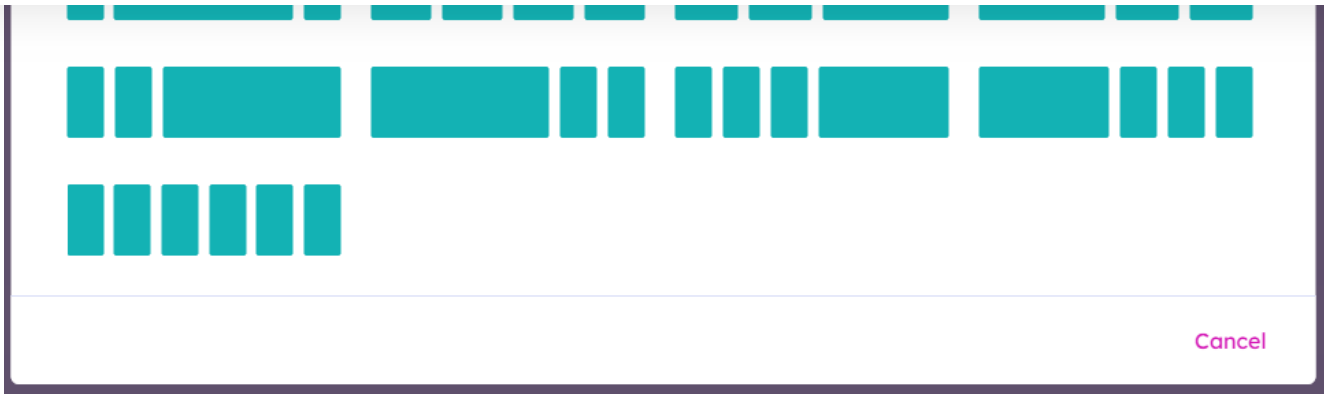

If you select a different layout it will change the number of columns

Choose Layout

By selecting the two column layout our row container now has two columns

Clicking the trashcan will delete the row container along with any widgets in the row.

Clicking CSS Classes will allow us to reference existing custom CSS classes to impact the row and or containers in the row

Close

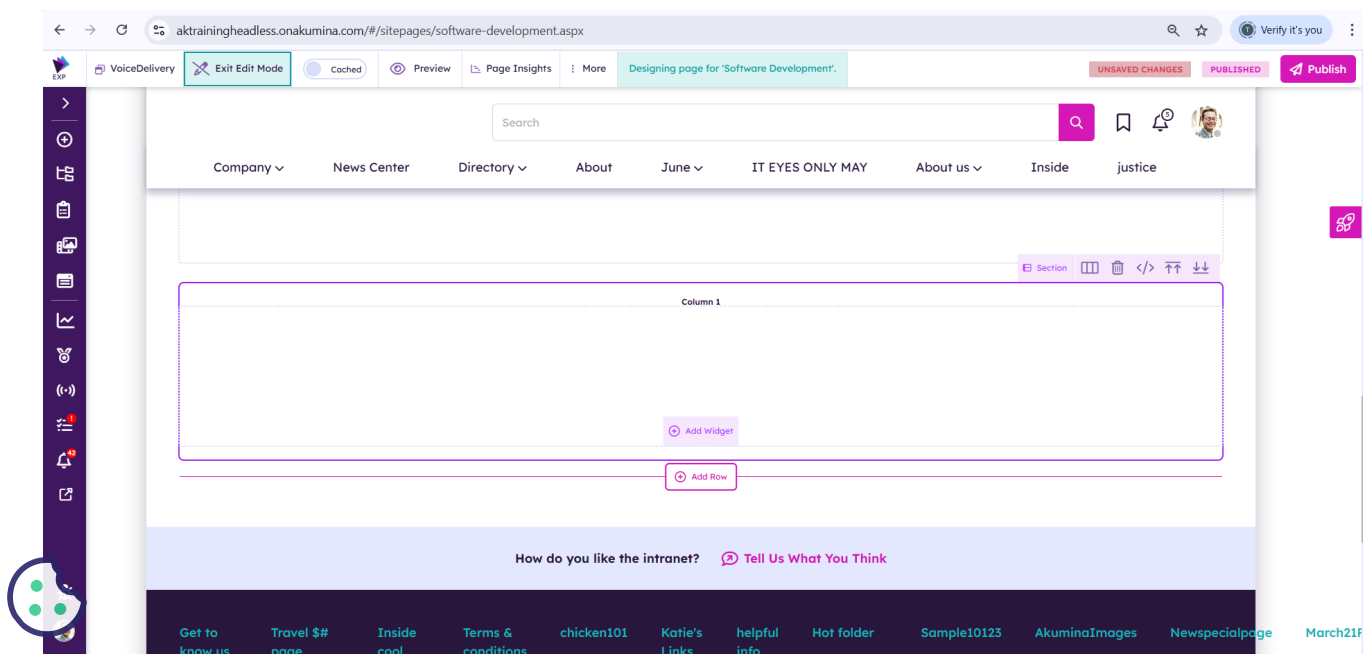

Save

If you want to add a row container above or below your selected container click the up or down arrows to add an additional row

When Editing a Page we can add widget instances by hovering over a container by clicking

## Add Widget
